

ARCHITECT

MONISHREE.R

"Whatever the mind of man can conceive and believe, it can achieve".
-Napoleon Hill

ABOUT

I see myself as a committed and hardworking person who has a keen interest in architecture and a strong desire to learn more about it and advance my knowledge of it. I appreciate the natural beauty of the seaside and hillside environment. I like to spend time outside with my family and friends when I'm not at my desk. Many of my formative years were spent working in the garden at home with my parents and grandparents. It sparked my desire in pursuing a profession in Landscape Design. According to my theory, a landscape should react to the nearby architecture as well as the social and environmental events. So, I want to pursue my higher education in this arena. I would like to learn techniques, plants and software skills where I can become an utopian professional and implement these ideas and bring out the solution for environmental problems to enhance the ecology.
