CURRICULUM VITAE

VAIBHAV JADAV

" Architecture as a discipline stands at a crossroads between people and our physical surroundings. It works on creating harmonious interaction between these two forces, taking away from neither and benefting both.
In my work as a student at CEPT University, I have done my best to maintain this relationship in each of my projects. I have aimed to maintain and preserve the natural features of the ground that we built one, while also creating functional, inspiring spaces for the humans we built for."
