

Prathamesh Vernekar

Karwar, India

28/ 01/ 2001

I interpret Architecture as an intense dialogue between the materials, physical form, people, and the environment holding all of this together. Architecture that emerges from the physical features of a place and then amalgamates with the materials to house livable spaces is of a greater value. I believe in the art of detailing and making that caters to the nuances of construction, as an important part of enhancing and amplifying the effects of architecture on the surroundings.
